FOR IMMEDIATE RELEASE
September 16, 2009

Now Available Witness Interview System

(Jaffrey NH) - TWITCO Distributing is pleased to announce the introduction of the ParMarLow Witness Interview System.

The ParMarLow Witness Interview System allows for prompting the Interviewer without interrupting the interview. The line of questioning can be directed without alerting the suspect. The short range (100' to 200') of the system keeps the transmissions in house. Used with the ParMarLow WR-PWRx07 Wireless Earpiece, the suspect is unaware that the interviewer is receiving information from the investigative team. This is extremely valuable when interviewing children and young adults who are very aware of their surroundings.

ParMarLow bundles the Okayo Wireless Microphone system with ParMarLow's own wired or wireless earphones to make a reliable low profile prompting system costing less than most law enforcement two way radios.

TWITCO specializes in the manufacture and distribution of accessories for two-way radios. TWITCO products are used by law enforcement, public safety and industry professionals seeking clear, reliable communications.

For more information on the Witness Interview System and other ParMarLow products please contact TWITCO at (800) 899-8948 or visit www.twitco.com.
